

Thomas Russell Giboney

Poteau, Oklahoma | 918.373.9072 | thomas@umtts.org | LinkedIn: [linkedin.com/in/giboney](https://www.linkedin.com/in/giboney) | Website: umtts.org

PROFESSIONAL PROFILE

Principal Systems Architect, AD Automation Engineer, and independent R&D lead with 28+ years in information technology, including senior-level depth in Active Directory architecture, LDAP, Group Policy, PowerShell automation, Windows Server, Microsoft Entra ID, Exchange, Office 365 hybrid environments, imaging/deployment, VMware, endpoint security, PAM/IAM, CyberArk, and enterprise operations. Since 2023, expanded that systems background into a connected R&D program spanning MBID, first-principles systems architecture, Mass Harmonics, forensic audit tooling, model-translation methodology, post-LLM cognitive architecture, and advanced LLM collaboration protocols. Known for building automation that removes repetitive work, modeling complex environments accurately, working through ambiguity, and turning unstable or manual processes into reliable technical systems.

TARGET ROLE

Senior technical leadership role where 28+ years of enterprise systems depth and a published first-principles research record can both contribute. Primary focus: remote Principal Systems Architect or AD Automation Engineer role with heavy PowerShell, Active Directory architecture, identity automation, and secure systems operations. Secondarily open to applied R&D, AI-era engineering, or advanced automation roles where complex-systems modeling, cognitive architecture, or LLM methodology are valued. Not limited to either track.

CORE TECHNICAL STRENGTHS

PowerShell Automation: advanced scripting for AD, Exchange, Office 365, SQL, WSUS, reporting, onboarding/offboarding, security operations, and change execution

Cloud / Collaboration: Office 365 hybrid deployment, Exchange 2003-2013, Google Workspace/G Suite, Azure/Microsoft Entra administration

Identity & Directory Architecture: Active Directory, LDAP, GPO, domain consolidation/migration, forest functional level upgrades, Microsoft Entra ID, hybrid identity

Virtualization / Platforms: VMware vSphere 4.1/5.1, VM creation/admin, environment management, App-V, Windows and Linux exposure

Windows Infrastructure: Windows Server 2003/2008/2012/2016/2019, Windows XP/7/8/10/11, patching, administration, troubleshooting, server roles

Programming / Tools: PowerShell, Batch, C/C++/C#, Python, VBS conversion, CMD/DOS, SQL queries, ongoing .NET/PHP/Python development

Security & Access: PAM/IAM, CyberArk, BitLocker, MBAM, data-at-rest encryption, privileged account management, endpoint security automation

R&D Architecture: simulation logic, first-principles modeling, audit-ledger design, protocol architecture, long-context LLM methodology

Deployment & Imaging: ImageX, WDS, MDT, SCCM/SCOM, Altiris, standard image creation, PXE deployments, Windows 10 migrations

Leadership / Delivery: project ownership, change controls, documentation, executive/VIP support, global coordination, ambiguity handling

RECENT R&D AND ARCHITECTURE FOCUS - 2023 TO PRESENT

This is part of the same professional technical trajectory, not a separate career detour: the work extends enterprise automation, architecture, simulation, validation, and system diagnosis into first-principles R&D and AI-era methodology.

Architecture / System	Resume-Ready Evidence of Work
MBID - Mass Ball Inertia Drive https://umtts.org/UMtts-Institute/MBID_OnePage-Pitch.pdf	Developed propulsion and inertial-control architecture involving structured internal mass motion, resonant phasing, damping behavior, simulation logic, and prototype-path planning.
Mass Harmonics https://umtts.org/monograph.html	Authored, documented, and published a first-principles substrate framework and supporting technical record, including equations, derivations, audit context, and model-translation implications. Published on Zenodo (DOI: 10.5281/zenodo.19659452) with companion neuroscience document (DOI: 10.5281/zenodo.17405719).
TVP v1.9 Universal Forensic Auditor https://umtts.org/tvp.html	Designed and implemented Python/CSV audit engine accepting any two of R_km, f_Hz, and vx_kms, deriving the third, running all nine topology/mode calculations, and exporting a 30-column ledger. Validated across 43 cosmological objects spanning 42+ orders of magnitude and 73 everyday-tier objects; growing audit ledger approaching 1,000 entries across all domains.
TWT - Transport With Translation https://umtts.org/twt.html	Developed model-translation layer for preserving valid legacy model structure while routing through a common substrate representation.
ψ_mMIND™ Architecture https://umtts.org/agi/Psi_mMIND-intro.html	Completed design of an AGI-capable cognition architecture focused on persistent state, scale-invariant, constant-time retrieval with monotone, non-decreasing, resonant memory.
LLM Collaboration Methodologies	Created long-context collaboration, source-grounding, hallucination detection, semantic drift control, recursive correction, and adversarial model-testing protocols across multiple LLM systems.

PUBLICATIONS

Mass Harmonics vX: A Unified Zero-Free-Parameter Framework

Self-Authored, UMTTS Institute.

Zenodo, Oct 2025-April-2026.

DOI: [10.5281/zenodo.17405719](https://doi.org/10.5281/zenodo.17405719)

First-principles substrate field framework deriving matter, forces, cosmology, and biological coherence from a single Master Field Equation with zero fitted or free parameters. Includes forensic audit protocol (TVP), elemental substrate lattice, and 61+ orders-of-magnitude validation record.

Derivation Proof-Set: <https://umtts.org/proof-set-v6.html>

Mass Harmonics and the Resonant Brain: A Substrate-First Neuroscience Framework

Self-Authored, UMTTS Institute.

Zenodo, April 2026

<https://umtts.org/resonant-brain.html>

Companion document deriving EEG band hierarchy, gamma binding frequency (40.0 Hz, 0.000% error), dendritic fractal-dimension bracket, working-memory ceiling, binding timescale, and consciousness metabolic cost from the same framework, with 12 falsifiable neuroscience predictions.

Cognitive Entrapment Prevention and Transparency Act (CEPTA)

Self-Authored, UMTts Institute.

Zenodo, Oct 2025

DOI [10.5281/zenodo.17388318](https://doi.org/10.5281/zenodo.17388318)

The Cognitive Entrapment Prevention and Transparency Act (CEPTA) proposes a comprehensive legal framework to define, detect, and prohibit manipulative communication practices that blend emotional conditioning with factual falsehoods-termed Cognitive Entrapment. The Act balances transparency, accountability, and free-speech protections through tiered mens rea standards, AES-based pre-distribution audits, and safe harbors for good-faith compliance.

Claude Under Constraint: An AI-Behavioral Ethnography (v1.6 Full Archive)

Self-Authored, UMTts Institute.

Zenodo, Oct 2025

DOI [10.5281/zenodo.17373316](https://doi.org/10.5281/zenodo.17373316)

This dataset accompanies the ethnographic study *Claude Under Constraint: An AI-Behavioral Ethnography*. It contains the complete archive of research artifacts used in the investigation, including chat logs, analysis files, supporting documents, and screenshots that document the behavioral anomalies observed in Anthropic's Claude AI under hidden safety constraints. All files are provided for full transparency and reproducibility of the forensic analysis.

PROFESSIONAL EXPERIENCE

Founder / Principal Systems Architect & R&D Lead

UMtts Institute / UMtts, LLC

1994-Present; primary R&D expansion 2023-Present | Remote / Independent

Founded and led independent technology, automation, and research initiatives spanning enterprise systems architecture, identity automation, complex-systems modeling, first-principles research, AI/LLM methodology, and technical documentation.

- Enterprise automation: built secure automation frameworks and scripts for repetitive administrative processes, reducing manual workload and improving consistency across user lifecycle, reporting, endpoint security, and operational maintenance tasks.
- Identity architecture: modeled, migrated, cleaned, and consolidated Active Directory environments; designed target-state directory and access structures; built automation around user, computer, security group, mailbox, and resource workflows.
- MBID: developed Mass Ball Inertia Drive architecture as an applied propulsion/inertial-control R&D program involving structured internal mass motion, phase behavior, damping response, simulation logic, and prototype-path planning.
- Mass Harmonics: authored, documented, and published a first-principles technical framework with supporting equations, derivations, model-translation implications, audit ledgers, and source records. Published on Zenodo with DOI (10.5281/zenodo.19659452); companion neuroscience document also published (DOI: 10.5281/zenodo.17405719).
- TVP v1.9 auditor: designed and implemented Python-based Universal Forensic Auditor with generic CSV pipeline, unit helpers, fault-code annotation, ratio factorization, and full nine-calculation ledger output across Sphere, Slab, and Torus topology/mode combinations. Validated across 43 cosmological objects spanning 42+ orders of magnitude and 73 everyday-tier objects.
- TWT and Psi_mMIND: developed Transport With Translation model-routing concept and Psi_mMIND architecture for coherent state persistence, source fidelity, non-vector retrieval, and post-LLM cognition/memory behavior.
- LLM methodologies: created operational protocols for long-context LLM collaboration, source-grounded reasoning, hallucination detection, semantic drift control, recursive correction, adversarial stress testing, and high-fidelity human/LLM engagement.

Environment: Windows, Linux, Azure/Microsoft cloud services, Python, PowerShell, CUDA-oriented simulation concepts, CSV audit pipelines, LLM systems and research tools.

PowerShell Automation Engineer & AD Architect - Windows AD

Hexaware / Conduent

September 2020-April 2024 | Remote

Created PowerShell scripts and GPOs to automate manual AD tasks, reporting, metrics, and change-control execution across a large multi-domain environment.

- Modeled and supported current AD environments across 80+ domains.
- Served as Active Directory Architect for consolidation, migration, cleanup, and forest functional level uplift from 2003 to 2016.
- Administered Azure and Microsoft Entra ID, with hands-on work in identity, user/computer object maintenance, and hybrid operational support.
- Designed PowerShell automation for reports, metrics, operational changes, and manual-process replacement, including efficiency-focused scripting patterns such as ArrayLists where appropriate.
- Submitted and executed change controls for script deployment and enterprise directory changes.

Environment: Primarily Windows, Active Directory, Group Policy, Microsoft Entra ID, PowerShell.

IT Systems Engineer - Windows AD & GPO Specialist

ON Semiconductor

October 2019-April 2020 | Phoenix, AZ; contract ended due to COVID-19 disruption

Owned GPO remediation, consolidation, and documentation as the sole Windows Engineer assigned to the Intellectual Property Protection Project.

- Modeled AD and GPO environments and documented GPO structure, administrative templates, security groups, replication, and related procedures.
- Executed change controls for phased GPO remediation and determined which Group Policy Preferences could be safely merged.
- Performed AD architecture, domain consolidation/migration, Azure/Microsoft Entra ID administration, and AD cleanup.
- Created PowerShell reports, metrics, change-execution scripts, and VBS-to-PowerShell conversions.
- Created SCCM collections to report networked machine OS status and supported data security, PAM, and cyber security requirements.

Environment: Windows 7/10, Windows Server 2012/2016, AD, GPO, PowerShell, SCCM, Azure/Microsoft Entra ID.

IT Systems Engineer - Senior Windows 10 Migration Specialist

Silicon Valley Bank

May 2019-September 2019 | Tempe, AZ

Handled Windows 10 migration engineering using Microsoft imaging, WDS/MDT/SCCM, configuration, deployments, GPO, AD, and automation scripting.

- Configured SCCM to deliver updated Windows 10 images over PXE boot and used Dell Command for BIOS update workflows when required.
- Administered, troubleshooted, and supported Windows 10 migration issues, AD object maintenance, BitLocker endpoint encryption, GPO, and MBAM.
- Built PowerShell and VBS reporting/automation and documented procedures for applications, intranet sites, and migration-related processes.

Environment: Windows 10, SCCM, WDS, MDT, GPO, AD, PowerShell, BitLocker, MBAM.

IT Systems Engineer - Windows 10 Imaging Specialist

Steward Healthcare - St. Luke's Hospital

August 2018-April 2019 | Phoenix, AZ

Handled desktop support, Microsoft imaging, Windows 10 configuration/deployments, AD/GPO support, and automation scripting in a healthcare environment.

- Installed and configured WSUS on Windows Server 2012 R2 and used Microsoft Baseline Security Analyzer to identify risks.
- Created standard company Windows 10 image with ImageX, WDS PXE, and MDT 2013; stood up SCCM as proof of concept for IT management.
- Performed AD cleanup, domain consolidation/migration support, BitLocker endpoint encryption using GPO/MBAM, and PowerShell/VBS automation.

Environment: Windows 10, Windows Server 2012 R2, WSUS, ImageX, WDS, MDT, SCCM, AD, GPO, PowerShell.

IT Security Engineer

Apex Systems / Wells Fargo Corporate

December 2015-November 2016 | Scottsdale, AZ

Worked as lead engineer on Data at Rest Encryption efforts in Windows Server 2008/2012 R2 environments.

- Identified systems requiring encryption according to Wells Fargo policies and provided support for BitLocker CPS and MBAM setup.
- Spoke with Lines of Business to answer technical questions and align encryption work with operational and security requirements.
- Designed automation to improve team workload and weekly metrics, including PowerShell scripts interfacing with intranet sites, SQL servers, Windows servers, and network appliances.

Environment: Windows Server 2008/2012 R2, BitLocker, MBAM, PowerShell, SQL, security operations.

Senior Level Desktop Support Engineer & Active Directory Architect

Amkor Technology

March 2015-December 2015 | Tempe, AZ

Handled senior desktop support, SCCM administration, AD architecture, imaging, patching, security initiatives, and privileged account management in a global multi-domain environment.

- Administered SCCM, WSUS, Windows 7 imaging with ImageX/WDS PXE, and enterprise desktop/laptop support.
- Led AD architecture, cleanup, consolidation, migration, and forest functional level uplift from 2003 to 2012.
- Implemented and administered CyberArk in a multi-domain enterprise environment, including privileged-account workflows for 1000+ global servers, applications, and databases.
- Developed secure PowerShell scripts to automate account/password ingestion into encrypted digital safes and automate WSUS security update approval.

Environment: Windows Server 2003/2012 R2, SCCM, WSUS, AD, GPO, CyberArk, PowerShell, BitLocker, MBAM.

IT Network Operations / Server & Network Administrator

Rural Metro Corporation / Insight Global

March 2014-March 2015 | Scottsdale, AZ

Handled network administration and support across Windows Server 2003/2008/2012, Active Directory, Exchange, Office 365, SQL, file/print services, and automation.

- Closed the highest number of ServiceNow tickets in the department despite starting after the platform was already in use.
- Performed Windows Server installation/configuration, SQL/IIS/file/print setup, permissions, AD security groups, user delegation, domain consolidation/migration, and forest functional level uplift.
- Created PowerShell scripts for AD, Exchange, Office 365, SQL, files, folders, service-account password rotation, onboarding, offboarding, mailbox backup handling, and operational automation.
- Set up PowerShell Desired State Configuration modules to maintain desired states on Windows domain member servers, especially SQL servers.

Environment: Windows Server 2003/2008/2012, AD, Exchange 2010/2013, Office 365, SQL, IIS, PowerShell DSC, ServiceNow.

IT Systems Administrator / Incident Analyst / Deskside Support

OneNeck

August 2012-April 2013 | Scottsdale, AZ

Supported PC/laptop/IP phone/peripheral/network issues and network administration duties.

- Administered Windows Server 2003/2008/2012, Active Directory, MS Exchange 2007, SCCM-based Windows 7 imaging, SQL server tasks, and VMware vSphere 5.1 administration.
- Created and resolved IT incidents, escalated through appropriate SPOCs and teams, and supported Cisco desk phones, mobile devices, physical servers, and Linux/Cisco exposure.

Environment: Windows, Linux, Cisco, VMware vSphere 5.1, Exchange 2007, SCCM, SQL.

IT Systems Administrator / Deskside Support

R&R Solutions

January 2011-July 2012 | Gravette, AR

Handled PC/laptop/IP phone/peripheral/network support, Windows Server administration, AD, GPO, Exchange, imaging, WDS/WSUS, and VMware.

- Administered Windows Server 2003/2008, AD, domain consolidation/migration, forest functional level uplift, Group Policy, logon/logoff scripting, software installations, and Exchange 2007.
- Migrated from Exchange to Google Apps for Business and supported Google Sites/Google+ knowledge work.
- Built Windows 7 images using ImageX over PXE and USB, administered WDS/WSUS, supported SharePoint-based tickets, VMware vSphere 4.1/5.1, printers, ShoreTel phones, and mobile devices.

Environment: Windows, Linux, Cisco, AD, GPO, Exchange 2007, Google Apps, ImageX, WDS, WSUS, VMware.

CEO / Manager / Network, Systems, Server, Desktop Administrator

Altered Reality, Inc.

July 2003-September 2004 | Pryor, OK

Founded and operated a LAN PC gaming center similar to an internet cafe, including network/server/workstation buildout and day-to-day operations.

- Planned, built, administered, and maintained LAN infrastructure, T1 connection, Windows Server 2003, Windows XP workstations, AD domain, and 24-port gigabit switching.
- Installed, upgraded, configured, and repaired computer systems, multimedia/memory/video/network/storage components, printers, scanners, permissions, network access, and Smart Launch software usage.

Environment: Windows Server 2003, Windows XP Professional, Active Directory, LAN/T1, PC hardware.

Career note: This resume includes roles most relevant to the current trajectory. Additional references, full recommendation letters, and earlier work history are available upon request.

Recommendation Letters

Vince Lopez

Director, Enterprise Systems

RE: Letter of Recommendation for Thomas Giboney

Thomas Giboney was a direct report to me within the infrastructure team at Amkor specifically within the Service Desk & Technical Support group. Thomas' efforts included but were not limited to the following:

- Management of the standard Corporate Operating System for Windows desktops/laptops
- OS/Application patch management
- Significant automation work that required **expertise in PowerShell & knowledge of Active Directory**
- Tier 3 troubleshooting of operating systems/hardware/networks/applications/mobile devices
- Onboarding & Training of new hires
- VIP support for corporate executives and quarterly meetings
- Documentation of processes & procedures
- Status reports/metrics/presentations

Over a period of time and with different assignments Thomas' expertise and skillset identified him as the lead member of the support group. Additional responsibilities included high visibility projects such as the privileged account management, while not part of his existing duties Thomas played an integral role in implementation of this Security initiative which included:

- Work with multi-national IT (Korea/China/Philippines/Taiwan/Singapore/Malaysia/Japan/France US)
- Product integration with a Multi-Domain & Multi-Forest Active Directory configuration/objects
- After-hour support to deliver training & tier 3 expertise to Asia & Europe
- Privilege account management for >1000 global Servers-Applications-Databases
- Development of secure PS scripts to automate account/password ingestion into encrypted digital safes

In closing, I highly recommend Thomas not only for his technical acumen and ability to research & learn quickly but also for a skill not many have, his ability to work with ambiguity, develop a plan & execute under pressure. Thomas was also very well liked & has great communication skills and became the IT member requested specifically by name by the executive staff.

If you have any further questions, please feel free to contact me.

Vince Lopez
